

2011 Compartment Planning and Information Sharing Summary CCF_K3V

The following is a strategic planning and information sharing initiative. This document refers to the geographic area as a planning COMPARTMENT. These Compartments are the basis of a 4 year plan window to construct and or remediate road and trail access, remove timber and apply intermediate silviculture treatments. Information is formulated early through estimates and initial concepts proposed for stakeholder discussion purposes. Monitoring efforts will be based on the final prescriptions and logging plans as this Summary may not be updated after its initial publication.

Name: BREW02			Permit Duration: Oct27th 2010 - 2013			
Location: Along the Brew FSR -south west of Whistler - Brew Management Unit						
Compartment Summary: includes previously logged areas by WFP under various retention and clear-felling strategies. Stand age 105 years from large scale wildfire. Some old forest remnants associated adjacent to main watercourses or expanded wet riparian areas. Original Stand: Fd 8; C1; H1						
Objectives:						
<ol style="list-style-type: none"> 1. Find opportunity for late season harvesting within already roaded area 2. Select area that has positive financial outcome with relatively low level constraints 3. Perform and monitor success of various second entry timber removal as defined in Silv Strategy 4. Apply examples of dispersed retention harvest scenarios and other Silv Strategies on Fd dominated ecosystems 						
Status: TU A is felled and 85% yarded, TU B is felled and yarded with wood decked to roadside. Layout of TUB, C, D and E are only recced and will proceed 2011.						
Treatment Unit	Activity	Season	Year	Area	M3	Silviculture Summary
A1	Logging	Fall	2010	4.6	2000	Low dispersed retention 50 TPH
A2	Logging	Fall	2010	0.8	200	Mod dispersed retention 80 TPH
B	Logging	Fall	2010	5.2	400	Mod retention 80 - 120 TPH
C	Logging and Trail	Spring	2011	2.0	850	Patch cut with 25% group retention along one side of watercourse (s4)
D	Logging Trail Cont Trail Rehab	Fall	2012	10.2	800	Remove grouped patches from previous harvest and retain 2-3 WT per patch.
E	Logging	Fall	2012	1.5	600	Patch cut
B	Deact	Spring	2010	0.2	-	Remove Access and reforest roadways
Compartment Considerations						
Visual (design and vantage points)			No vantage point from Highway - Mod retention on upside of FSR with no planned further entry to retain forested setting.			
Rare Forest Ecosystems (old seral)			None except for Riparian Reserve already under RMA protection throughout.			
Recreation (com. or public)			FSR provides access to Brew Trail - Maintain Permanent			
Water (wetland, stream, river)			Headwater systems within harvest areas, RMA already defined, undefined vernal ponds have no machine and concentrated tree retention			
First Nation (Cult Heritage Res)			Reviewed total compartment with no concerns			
Other:			Campground requested feathering along upslope ridge.			
			Retain White Pine for Biodiversity where possible			
			28% of Compartment has permanently reserved forest.
